OILFIELD THREAD PROTECTOR CLEANING

**C: 337-257-3316 O: 337-252-7217**

## About Us

Sperry-X by Nicky P was formed in the Summer of 2019. We are a small start up company with 30 years of industry experience. Our experience includes drilling in areas on Land, Shelf, Deep and Ultra Deep Water environments. Our goal is to provide a safe and quality service with 100% customer satisfaction.

We are a oilfield thread protector cleaning business. We provide the customer with a cost effective solution to the never ending accumulation of dirty and damaged thread protectors at their facility. We pick up, clean, process, and deliver your reconditioned thread protectors. The recycling is preformed utilizing a machine and a step by step process to ensure consistent results.

Sperry-X recycles damaged and nonconformance thread protectors in-house to ensure all pipe dope and joint compounds are removed and properly disposed.

Our goal is to help companies **Go Green** through source reduction, recycling, treatment, and disposal of thread protectors. Utilizing our unique service, we are certain we can accomplish the goal.

## Our Services

### PICK UP AND DELIVERY

The thread protectors are picked up, brought into our shop, reconditioned, visually inspected, and delivered back to our customers.

Our mission is to help facilitate oil and gas service companies to protect the environment by preventing thousands of tons of plastics and pipe joint compounds from entering landfills each year.

Our cleaning process is environmentally friendly. We use SAFETY-KLEEN PREMIUM GOLD SOLVENT, a service company that helps facilitate our mission, by leading the way in responsible environmental solutions.

## Go Green

### ENVIRONMENTAL

In 2015 there was an estimate of 265 million tons of municipal solid waste. Of that, plastic was 35.5 million tons or 13.1% of generation. And it continues to grow.

By minimizing impact to the environment and by saving the company money. Our recovery program provides businesses like yours with a RECYCLING option for their thread protectors instead of disposal. By reconditioning, we are REDUCING the amount of future waste. Our reconditioning process helps the environment by REUSING the thread protectors.
